Summary of Key Findings

- Educators rating their attitudes about AI as positive or very positive increased from 25% before the grant to 69% at the end of the grant.
- Educators rating their attitudes about AI as negative or very negative decreased from 28% before the grant to 9% at the end of the grant.
- 72% of teachers who reported using grant-funded AI platforms rated the overall impact on their teaching practice as moderate, significant, or very significant.
- The most commonly mentioned impacts on teaching practices were the time-saving benefits of using the AI platform; the ability to generate content and ideas; and support related to data, feedback, and assessment.
- 66% of teachers who reported using grant-funded AI platforms rated the overall impact on their students' learning as positive or very positive.
- The most commonly mentioned impacts on student learning were those related to tutoring and feedback; improved educational content; and the ability to provide personalized, differentiated learning experiences.

Introduction

Grant Background

Indiana's annual Digital Learning Grant is designed to support public school corporations and charter schools in their efforts to:

- Leverage technology to enhance student learning experiences.
- Foster innovation in educational practices.
- Promote effective digital pedagogies for teachers.

This grant is part of a broader initiative by the Indiana Department of Education (IDOE) to integrate technology meaningfully into classrooms, ensuring that both students and educators are equipped for success in blended and virtual learning environments.

The [2024-25 Digital Learning Grant](#) prioritized initiatives that sought to fund projects emphasizing safe and secure access to artificial intelligence (AI) platforms utilizing large language models to support student tutoring and teacher administrative tasks.

Of the 99 grant awardees, 53 school corporations funded AI projects. This report focuses on those recipients. This included 8,941 educators who supported 97,146 students.

Previously, IDOE offered the AI-Powered Platform Pilot Grant during the 2023-24 school year. At the conclusion of that grant, a survey was conducted among participating teachers. These results were collected and published in the [AI-Powered Platform Pilot Grant Final Report](#).

AI Platforms

IDOE established AI platform [vendor requirements](#) for schools to use as part of their selection process. In alignment with local control structures, schools had the autonomy to choose vendors that best met the unique needs of their community and establish a contractual relationship directly with their chosen vendor. The following platforms were selected by schools and met the platform vendor requirements: [Amira](#), [Chat for Schools](#) (Skill Struck), [Edia](#), [Khanmigo](#) (Khan Academy), [MagicSchool](#), [SchoolAI](#), and [Snorkl](#). Table 1 shows the number of school corporations, teachers, and students utilizing each platform as part of the AI pilot.

Table 1. Breakdown of grant participation by platform vendor.

	Amira	Chat for Schools	Edia	Khan-migo	Magic-School	School-AI	Snorkl
Corporations	5	7	1	23	11	5	1
Teachers	696	2,010	6	1,914	1,860	2,236	61
Students	14,764	17,556	480	18,877	22,409	19,654	1,422

Educator Feedback Survey

This report features responses from teachers participating in AI initiatives funded by the Digital Learning Grant during the 2024-25 school year. The primary goals of this survey are to understand platform usefulness, student and teacher impact, training effectiveness, and the overall experience using the platform.

Response Sample

2,096 individual educators responded to the survey during the window of Wednesday, April 30, 2025, through Saturday, May 31, 2025. Tables 2, 3, and 4 show the response distributions by grade level, subject area, and platform. Tables 2 and 3 include data for questions with multiple-select responses; therefore, the total number of responses is greater than the response sample.

Report Response Sample: 2,096 Educators

Table 2. Number of survey respondents by grade level.

Grade Level	Number of Selections <i>Respondents could select multiple options that apply.</i>
Kindergarten	184
1	221
2	241
3	269
4	219
5	212
6	326
7	363
8	382
9	571
10	601
11	622
12	596
Other	92

Table 3. Number of survey respondents by subject area.

Subject Area	Number of Selections <i>Respondents could select multiple options that apply.</i>
English/Language Arts	1,050
Mathematics	747
Science	543
Social Studies	509
Other	569

Table 4. Number of survey respondents by platform vendor.

Platform	Number of Teachers Using Each Platform ¹
Amira	206
Chat for Schools	180
Edia	3
Khanmigo	425
MagicSchool AI	1,108
SchoolAI	159
Snorkl	14

Prior Usage

21% of surveyed teachers reported prior experience using the specific platform, and 18% used a similar platform or tool before the grant. For those who reported using a similar platform or tool prior to the pilot grant, more than 48% indicated ChatGPT was the platform.

Use of Platforms

Teachers were asked how frequently they used the AI platform funded by the grant for their own tasks. Figure 1 illustrates the frequency of use. 56% of respondents reported using the platform about once a week or more.

¹ One respondent selected a platform that was not one of those chosen by schools for this grant opportunity.

Figure 1. Frequency of platform usage by teachers.

How often do you use the AI platform that is part of this grant for your own work tasks?

The platforms were used for a variety of teaching-related tasks. Figure 2 illustrates the type of reported tasks. Lesson planning received the highest amount of responses, followed by differentiation support and rubric creation.

Figure 2. Types of tasks the platform was used for.

Which type of teacher task(s) do you use the AI platform for?
(select all that apply)

Attitudes Towards AI

Educators were asked to indicate their attitudes towards AI before and after using it as part of the grant. In a Likert scale question, 25% of educators rated their attitudes towards AI before the grant as positive or very positive. By the end of the grant cycle, 69% rated their attitudes towards AI as positive or very positive. Educators rating their attitudes as negative or very negative decreased from 28% before the grant to 9% at the end of the grant.

Figure 3. Attitude towards AI before the grant

Figure 4. Attitude towards AI after the grant

Educator responses to questions throughout the survey illustrated the shift in educator attitudes towards AI.

"I am still learning about AI and how to use it to my advantage. My opinion on this topic has shifted from skeptical to optimistic." - 7th Grade Teacher

"Before using this platform, I had no previous experience with AI. Now, I can see the possibilities are endless." - 6th Grade Teacher

"I'm definitely more flexible with AI integration than I used to be. I used to be a bit more of a naysayer, but I do understand that it can enrich student engagement and bring fresh ideas to the table." - High School Teacher

"It has helped me realize that it is okay to utilize technology in a beneficial manner. I have been able to use it to find relevant materials for MY students." - Jr/Sr High School Teacher

"I was skeptical about the positive impact it could have on the classroom but I was mistaken. I love it and my students love it!" - 3rd Grade Teacher

"I wish I had started using it sooner! Sometimes it's hard for old dogs to learn new tricks - but when we do, we learn to love them!" - High School Teacher

Teacher Impact

One of the primary aims of the survey was to understand the grant's impact on teaching practices. In a Likert scale question, 72% of teachers who reported using the platform rated the overall impact on their teaching practice as moderate, significant, or very significant, as shown in Figure 5. 8% indicated no impact on their teaching practice.

Figure 5. Impact on teaching practice.

How would you rate the overall impact using this platform has had on your teaching practice? (n = 1986)

As a follow-up to the Likert scale question, respondents were asked to explain their rating in an open-ended question. The most frequent responses are outlined in the following sections with exemplifying quotes.

Saving Time

The most frequently mentioned impact on teaching practices was the time-saving benefits of using the AI platform. Teachers stated that they were able to streamline tasks and increase efficiency, reserving extra time for other purposes.

"The overall impact on my teaching practice hasn't been about a fundamental shift in how I teach, but rather it has been significant in freeing up crucial time that now allows me to focus more intentionally on the aspects of my practice that truly matter." - Middle School Teacher

"It reduced the effort and time I needed to plan lessons, rubrics, etc. This time-saving tool allowed me more time to build relationships with my students." - 7th Grade Teacher

"Freeing up my time from paperwork to be able to spend more time grading and working with students has made my work/life balance much better." - High School Teacher

"It does a great job of freeing time and cognitive space. I can put my attention towards more pressing matters rather than the mundane tasks that used to take up time." - Title 1 Teacher, Elementary

*"As a new teacher, it has greatly aided making me want to come back and teach. ;-)
And by that I mean, SO MANY hours were better utilized. Instead of monotonously formatting a worksheet, I'm spending my time creating better lessons." - High School Teacher*

Content and Idea Generation

Educator responses highlighted that the ability to generate instructional content and ideas using the AI platform improved their practice. Teachers mentioned leveraging AI for creation in various ways, including developing lesson plans, rubrics, depth-of-knowledge questions, and curriculum maps.

"(The AI platform) has changed the way I plan and given me an avenue for more efficient planning, creating assessments, and lesson hooks for daily lessons. It has given me grade specific and content/subject specific goals, questions, and deeper thinking questions I can quickly plug into lessons that are engaging to students." - Middle School Teacher

"This platform made rubric creation much more efficient and purposeful." - 6th Grade Teacher

"It's hasn't really changed how I teach, or what I teach, it's just given me more ideas." - Library Media Specialist

"This helped me create deeper questions for students and ideas that I would have not thought about before." - 6th Grade Teacher

Data, Feedback, and Assessment

Educators shared that AI tools were useful for assessing students and producing insights that helped them develop future instructional support. Educators indicated that AI platforms assisted them in providing timely, actionable feedback to students. Some educators stated that platforms helped them support student growth and improvement.

"I use (the AI platform) to help with progress monitoring among other things that helps me stay organized and collect data in an efficient manner." - 5th Grade Teacher

"It has given me insights to what I am currently doing and what I should be doing in order to make my lessons better for my students." - 7th Grade Teacher

"I only use (the AI platform) on select assignments. It is a good resource for tracking data and identifying areas for more student focus." - 10th Grade Teacher

"I feel like I've been better at tracking data, successes, failure, etc.; I also feel more engaged when I have something to boost my own ideas." - 9th Grade Teacher

Differentiation

Teachers described how the platforms supported their efforts to tailor instruction to meet student needs. They used AI to adapt instructional materials to match students' individual learning levels.

"I have used the AI tools in (the AI platform) to help with lesson planning, coming up with engaging and relatable lesson starters, and I have used it for differentiation. The tool will allow me to use features such as "chunking" or creating bullet points for longer passages and will help to create passages that are better suited for a student's level should we need things adjusted or shortened." - 3rd Grade Teacher

"The AI platform has made a significant impact in my teaching by allowing me to differentiate at my fingertips and develop questions that fit higher leveling thinking." - Elementary Teacher

"I use (the AI platform) to help me improve my lessons. I will feed it activities that I currently do or activities that I want to do and ask it to make them better. I will also feed (the AI platform) material and ask it to create equivalent material but at a lower reading level. This is a super manageable way to accommodate for beginner Multilingual Learners." - District-wide Coach

"I feel much more confident in my ability to differentiate and make an impact for each of my students." - High School Teacher

Reaching/Engaging Students

Teachers reported using AI platforms to engage and motivate students. They used tools to connect with student interests and develop curiosity.

"Overall, the integration of (the AI Platform) into my teaching practice has transformed the way I approach instruction. It has empowered me to create a more engaging, personalized, and data-informed learning environment that supports all students in reaching their full potential."
- Middle School Teacher

"When I wanted to create extra examples, practice, or assessments, this saved me HOURS and helped me to create content connected to student interests (eg - math problems related to Minecraft). They were more engaged." - 6th Grade Teacher

"My students have become more curious about the topics and ask questions beyond what I am teaching them." - 9th/10th Grade Teacher

"Using (the AI platform) has expanded the activities I can offer to my students. Not only have I used it to help students get feedback on their writing, I was also able to create custom chatbots so that students could interview characters from Shakespeare's Julius Caesar. It help to give the students a better understanding of the play as well as increased their engagement with the text."
- 7th Grade Teacher

Communication

Teachers reported that communication was a common use of AI platforms, especially for revising and composing emails, generating recommendation letters efficiently, and strengthening parent-teacher communication.

"Using this platform to draft letters of recommendation for students has been extremely helpful. I input the student information I'd like to include, and it helps me draft my letters. It also helps me draft professional emails and communications home to parents." - High School Counselor

"It has helped me write lots of communication between parents and staff. I have used it to generate questions or ideas for tasks that I normally would have to come up with on the fly. It is basically like using a co-worker to bounce ideas off of to continue to learn and grow." - 5th Grade Teacher

"I do think it helped me to stay organized and frame my communications in a professional manner." - High School Teacher

"I use AI to generate the body of a letter to parents about behavior problems in class. It has helped clearly explain and neutralize my own emotions from what I experienced. I can vent openly and use AI to professionalize the communication. It also saves me so much time in the writing of the letter." - 7th Grade Teacher

Student Impact

Another key objective of the survey was to evaluate the grant activities' impact on student learning. In a Likert scale question, 66% of teachers who reported using the platform rated the overall impact on their students' learning as positive or very positive, as shown in Figure 6. This is 9% higher than the same question asked in the previous year's survey, including a 7% increase in the percentage of teachers rating the impact as very positive.

Figure 6. Impact on student learning.

How would you rate the overall impact using this platform has had on your students' learning? (n = 1986)

As a follow-up to the Likert scale question, respondents were asked to explain their rating in an open-ended question. The top responses are outlined in the following sections with exemplifying quotes.

Tutoring and Feedback

Teachers discussed the value of the platform's ability to tutor and guide students to improve their work and help them reach answers to questions without providing those answers outright. They stated that students were able to get immediate feedback, especially in the area of writing, which resulted in improved student work. AI tutors were a source students could use when the teacher was not available or when the students were at home. Students were able to use the platforms to study for upcoming assessments.

"When using the tutor feature, students were having clear discussions with the tutor over their research. The tutor gives students a safe place to be wrong and ask questions without the fear of an audience. Students that never participate in class, were thoroughly engaged in discussions with the tutor using critical thinking skills and higher level vocabulary. The tutor also provides me with feedback on which students are struggling with certain concepts-allowing me the opportunity to be some reteaching." - 6th Grade Teacher

"Immediate feedback on their writing has been wonderful. Before, it would take me a lot of time to grade each student's writing and give them feedback. Now, they are able to get instant feedback and make immediate changes." - 3rd Grade Teacher

"It encourages independent thinking by guiding learners with questions instead of giving direct answers. It helps them develop problem solving skills." - 7th/8th Grade Teacher

"AI provided instantaneous feedback on student writing which helped them improve their writing quickly than waiting in a long line waiting for me to give feedback as I read their work. This helped students work continuously instead of playing the waiting game." - Grade 5 Teacher

"I teach AP World History, and I used [the AI platform] to provide my students feedback on their writing skills, content knowledge, and overall skill development. It has been incredibly helpful useful and I have had a large number of students comment on how much it helped them." - High School Teacher

Engagement and Enjoyment

Teachers indicated that students enjoyed their work on the AI platforms. They reported increased engagement and higher motivation when students used the platform. While some indicated that students did not like it, more reported that students enjoyed using the platforms.

"The students are engaged and love learning in different ways. This is a new way of learning for them." - 3rd Grade Teacher

"They seem more engaged with the readings, since more of the texts are about topics they are interested in." - 7th Grade Teacher

"I have seen positive changes in my students learning as a result of (the AI platform). Their engagement is higher, and they thoroughly enjoy being in the classroom." - 5th Grade Teacher

"It gives the students another avenue to explore new topics for the curriculum and it also keeps them involved and engaged because they are learning about the content in a way that makes sense and interests them." - 7th Grade Teacher

Improved Educational Content

Teachers indicated that they were able to leverage AI tools to improve content, thus benefiting the students. Saving time on some tasks allowed teachers the opportunity to spend more time on more important work, which provided students with a better learning experience.

"(The AI platform) has positively impacted student learning by helping me create more personalized, engaging, and accessible materials. With the time I save using the platform, I'm able to offer more targeted support, give quicker feedback, and design activities that better meet my students' needs and interests." - Middle School Teacher

"It lets me be more prepared, which in turn makes my teaching better and students learning better." - 7th/8th Grade Teacher

"I think any time a teacher is inspired by a new idea or approach, the students benefit as that comes across in the presentation and the assigned work." - High School Teacher

"Because I was able to make multiple examples quickly, I did not spend all of my time writing just one and was able to use a variety of examples to teach the students, which I think was helpful." - High School Teacher

Differentiation and Personalized Learning

Teachers stated that differentiated materials positively impacted student learning, providing personalized learning experiences for their students. Materials were able to be adjusted to match the instructional needs of individual students. Teachers commented that this helped them support students with disabilities, students learning English, and high-ability students.

"Students use (the AI platform) in math regularly. This resource gives students standards-based practice. It also allows students who are academically above grade level a chance to challenge themselves with higher-level activities. On the flip side, I can make sure students struggling are given activities to match their skill level." - 5th Grade Teacher

"Because I used (the AI Platform) to help find alternatives, students were able to have fewer barriers to their learning. Therefore, they seemed to be more engaged and confident in the content." - UDL Facilitator, Grades 5/6

"We were able to create differentiated learning for students, such as decodable books/passages, creating similar conceptual math work that differentiated math numbers." - Kindergarten teacher

"The students who were able to use the platform were able to customize their learning and get differentiated help on all classroom work. This was very beneficial to both our Special Education students and our Multilingual Learners." - K-12 Coach

Academic Improvement

Some educators observed academic growth and improvement among students who engaged with the platforms. However, as with all survey responses, these observations are self-reported and should not be interpreted as definitive evidence of student outcomes.

"I think that most students have seen a general increase in understanding while using (the AI platform) and though the students might not notice their improvements, from a teacher's point of view, the students have been increasing academically." - 6th Grade Teacher

"I think that the students have really increased in writing with (the AI platform). They don't really like it because it forces them to think through their writing process instead of just starting the writing without planning." - 7th/8th Grade Teacher

"We utilized our AI platform to assist in SAT preparation. This is the first year we were able to see growth in all areas of our SAT scores." - Administrator

"As we have began reviewing data compared with IREAD performance, we are beginning to see some correlations to students' growth and performance over the course of the year on the AI platform and their success on IREAD." - Administrator

Student Independence and Confidence

Teachers reported an increase in the levels of student independence and confidence. Students were able to learn ways to use AI to support their learning.

"I believe AI has helped them be more independent, ironically. For instance, they don't rely as heavily on me to help them edit their writing, they can use (the AI platform) to get a few suggestions before conferencing with me." - Elementary Multilingual Learner Teacher

"Students love that they are able to use this platform to help themselves. Sometimes students do not feel comfortable asking for help. Many times students do not have someone at home to help them with work...now they do." - 5th Grade Teacher

"Students are independently trying to solve problems and learn skills using AI instead of waiting on a teacher to help." - Grade K-12 Coach

"Students learned a positive way in which to use AI, as a tool to help them grow and not a work-replacement tool." - High School Social Studies Teacher

Training

A commitment to providing high-quality training to participating teachers across multiple modalities was an IDOE requirement for any platform vendor that schools selected. Vendor training was required to consider thoughtful integration of the platform within blended and/or virtual learning models, including onboarding support, platform training (both technical and pedagogical), periodic check-ins on a schedule agreed upon between the vendor and school, and guidance to support teachers in providing child safety instructions to students and parents. Figure 7 illustrates the number of training sessions provided by the AI platform vendor that the teachers reported attending.

Figure 7. Number of vendor training sessions attended by teachers.

Figure 8 shares how teachers rated the effectiveness of vendor platform trainings. 53% indicated that the training provided by the platform vendor on using the platform was very or somewhat effective. 61% reported that their schools offered additional professional development related to AI.

Figure 6. Training effectiveness.

Challenges

As with any program or platform, teachers and students encountered some challenges. The challenges outlined in this section were identified in responses to multiple open-ended questions and are not in ranked order.

Overreliance

Some educators expressed concern about the potential for both teachers and students to become overreliant on AI and the potential consequences associated with this.

"I think sometimes it keeps them relying on technology vs using their own brain. The students are smart but some not as confident, and they tend to rely on those sources in order to answer questions." - High School Teacher

"I personally try not to use AI unless it is going to save me a large chunk of time because I don't want to become reliant on something else creating things for me." - 4th Grade Teacher

User Experience

Several users expressed that both students and teachers faced obstacles when interacting with the platforms. Some reported that the platform was difficult for students to navigate or didn't always function properly.

"It is difficult for the students to navigate on their own. It is more difficult for them to stay on task when it is a computer being with them rather than a person." - Kindergarten Teacher

"The tool was not user friendly. The interface constantly changed." - Middle/High School Coach

Content for All Subject Areas

Some teachers stated that they believed AI platforms were not applicable to their subject areas or grade level.

"(It was) hard to find AI support for the level of mathematics I teach--higher math is not readily available or easily understood by AI to generate what I need." - High School Teacher

"I find that it's just easier to write my own instructions/content because AI is usually missing steps with the processes I cover in my art classes." - High School Teacher

Lack of Time for Implementation

Time was a factor for some educators. They indicated competing priorities prevented them from implementing the platform in the way they wanted.

"I think that we haven't had the time to reflect on its benefit and design a plan to maximize its impact." - High School Administrator

"I found some ways that the platform could be beneficial for my teaching practice. However, I was not able to analyze the full effect of it because I had many other items that I needed to devote my time to this year." - 7th/8th Grade Teacher

AI Platform Survey Data

This data alone should not be used as evidence for selecting and procuring a specific AI platform vendor. Numerous factors can impact this data, including, but not limited to, the number of survey responses, length of teacher/student use of the platform, subject area, implementation size, attitudes towards AI, etc. The primary purpose of the inclusion of this data is to promote transparency in reporting feedback based on the grant implementation data. The data set includes only educators who reported having used the platform for their own tasks, with students, or both. ²

² Platform impact data for Edia and Snorkl has not been included due to the low number of responses, fewer than 1% of the total collected.

Amira

As shown in Figures 7 and 8, 86% of teachers who used Amira indicated that the platform impacted their teaching practice, with 34% rating the impact as 'significant' or 'very significant.' 76% rated the overall impact as 'positive' or 'very positive' on student learning.

Figure 7. Amira teaching practice impact.

Figure 8. Amira student learning impact.

Chat for Schools

As shown in Figures 9 and 10, 89% of teachers who used Chat for Schools indicated that the platform impacted their teaching practice, with 27% rating the impact as 'significant' or 'very significant.' 47% rated the overall impact on student learning as 'positive' or 'very positive.'

Figure 9. Chat for Schools teaching practice impact.

Figure 10. Chat for Schools student learning impact.

Khanmigo

As shown in Figures 11 and 12, 89% of teachers who used Khanmigo indicated that the platform impacted their teaching practice, with 30% rating the impact as 'significant' or 'very significant.' 60% rated the overall impact on student learning as 'positive' or 'very positive.'

Figure 11. Khanmigo teaching practice impact.

Figure 12. Khanmigo student learning impact.

MagicSchool

As shown in Figures 13 and 14, 94% of teachers who used MagicSchool indicated that the platform impacted their teaching practice, with 45% rating the impact as 'significant' or 'very significant.' 69% rated the overall impact on student learning as 'positive' or 'very positive.'

Figure 13. MagicSchool teaching practice impact.

Figure 14. MagicSchool student learning impact.

SchoolAI

As shown in Figures 15 and 16, 96% of teachers who used SchoolAI indicated that the platform impacted their teaching practice, with 52% rating the impact as 'significant' or 'very significant.' 75% rated the overall impact on student learning as 'positive' or 'very positive.'

Figure 15. SchoolAI teaching practice impact.

Figure 16. SchoolAI student learning impact.

Next Steps

IDOE continues to provide additional guidance and support for educators across the state of Indiana. The results of this report may contribute to future projects related to artificial intelligence.

- Data shows educators who participated in the implementation of AI platforms showed more positive attitudes toward AI. IDOE continues its efforts to support similar projects through the Digital Learning Grant taking place during the current school year, 2025-26, and its plan for the next grant iteration during the 2026-27 school year.
- Data shows 64% of educators reported attending a training session. IDOE will take steps to increase this number, including connecting with current grantees, requiring a more specific commitment from future grantees, and connecting with vendors about training opportunities.
- Data shows educators identify time savings as the most significant benefit to their teaching practice. While productivity is a meaningful benefit of AI, the potential for teachers to differentiate content, personalize learning, and make data-driven decisions holds great value. IDOE remains committed to highlighting real examples of educators using AI to innovate in their classrooms.
- Data shows educators report that AI's support for student tutoring and feedback provides the largest impact on student learning. IDOE plans to amplify student voices who can speak to their experiences with AI in classrooms.

Conclusion

The Digital Learning Grant funded 99 projects across the state of Indiana, including 53 that funded the implementation of an AI-powered educational platform. To provide transparency and inform future work, a survey was sent to all participating educators, and this report analyzes 2,096 responses. The teacher feedback survey highlighted platform usage, attitudes toward AI, and the impacts and challenges of using the AI platforms for teaching practices and student learning. Data showed that teachers who gained experience working with AI platforms showed much more positive attitudes about AI. They reported using AI to save time, generate content and ideas, provide guidance and feedback for students, differentiate and personalize learning experiences, improve communication, and engage students.

Most Consistently Used Tools	Percent of Unique Users
With an Exercise	61.4
Writing Coach	22.6
With a Video	10.1
Tutor Me: Math and Science	9.4
Tutor Me: Humanities	6.4

Figure 23: MagicSchool: User Participation

	Activated User Count (minimum 1 generation)	Total Generations
Educators	2,612	139,380
Students	26,983	192,808

Figure 24: MagicSchool: Top Tools

Top Tools	Users	Generations
Writing Feedback	10,652	68,877
Character Chatbot	3,513	39,276
Raina	802	28,457
Custom Chatbot	2,610	26,870
Raina for Students	2,997	15,139
Research Assistant	4,425	14,325
Quiz Me	933	10,599
Text Rewriter	486	9,159
Worksheet Generator	1,047	7,319
Multiple Choice Quiz	792	6,671

Figure 25: SchoolAI: Most Popular Student Activities

Most Popular Student Activities	Number of Students Interacting
Sidekick	7,806
Bellringer	2,899
Create Your Own Assignment	1,871
Video Explorer	1,680
Grammar Check	1,104
Historical Figure Chatbot	666
2024 Election	525
Health Triangle	521

Figure 26: SchoolAI: Assistant Usage

Assistant Usage	Number of Educator Conversations
Coteachers	3,380
Curriculum Coach	220
Research Assistant	128
Space Designer	119
Essay Grading Assistant	111

Figure 27: Snorkl: Student Statistics

Student Usage (min.)	15,400
Student Feedback Received	over 35,000
Growth/Mastery on Attempted Items	73%
Average Attempts per Item	2.1

Appendix C: Qualitative Response Details

Teaching Impact

Terms	Definition/Markers	% of responses
Saving time	Using the platform saves time and/or provides more time for other tasks	19.3%
Content and idea generation	Using the platform for lesson planning, lesson materials, brainstorming, etc.	16.0%
Data, feedback, and assessment	Targeted data on each student, ability to conduct assessments and get additional data	7.7%
Differentiation	Platform assisting with differentiation content and lesson planning, “meeting students where they are”, content at student level	7.6%
Reaching/Engaging Students	Providing motivation or engagement, connecting to student interests	3.51%
Communication	Proofreading, first draft generation, generating recommendation letters, improve writing clarity	3.46%
Increasing creativity	Allowing teachers to feel more creative	2.1%
Build Knowledge of Content and AI	Using a platform to deepen knowledge of subject area or artificial intelligence	1.0%
Prepared/Organized	A sense of being more organized and prepared for a school day	1.0%
Extra practice	Providing an option for students to get additional practice and have lessons reinforced	0.9%
Adapting to the AI World/Future	Mentions of the future and AI's place in it	0.5%
Rigor	Increasing the difficulty of student tasks	0.4%
Confidence	Feeling more confident and able with AI and subject area content	0.3%

Student Impact

Terms	Definition	% of responses
Tutoring and feedback	Students receive tutoring, tailored support, step-by-step assistance, targeted feedback	13.1%
Engagement and enjoyment	Students like using the platforms, student engagement	10.1%
Improved educational content	Teachers feel that students benefited from improved content	7.4%
Differentiation and personalized learning	Students get content specific to their level and/or interests, in-the-moment support	7.0%
Academic Improvement	Teachers note academic improvement	5.3%
Student independence and confidence	Self-efficacy, autonomy, accountability, freedom of choice, growing confidence in skills	4.5%
Extra practice	Students receive extra help and practice	1.8%
Student saving time	Educators note that students had more time for other tasks	0.4%
Access	Student access to AI	0.3%
Accountability	Teachers note platforms hold students accountable for their learning	0.2%

Appendix D: Statement of AI Use

Microsoft's Copilot was used during the creation of this report in the ways described below:

- AI provided suggestions for rephrasing human-written text. These suggestions were sometimes used and adjusted as needed.
- Support for the categorization of open-ended responses was attempted. The AI's product was not useful, and human methods were used instead.
- AI supported the selection of quotes best representing the over categories determined by human analysis. All selections were reviewed by humans for relevance and accuracy.
